Brown's 50th Year Filled With Growth And Change

Beaverton, MI - BROWN Machine LLC one of the largest manufacturers of thermoforming equipment, now offers perhaps the most complete range of thermoforming equipment and services in the plastics industry. Now in its 50th year of business, BROWN continues to expand and enhance production methods and systems.

The tradition of continuing innovations for quality and productivity improvement have never been more apparent than they are today, said Dick Lacana, BROWN President and CEO. "In my first year here, the long term dedication of our employees to helping customers meet new and often unique challenges is perhaps our greatest asset".

Continuing to better serve their customer's, BROWN has expanded their market coverage and product lines along with standardizing equipment to provide lower costs.

BROWN continues to provide 24-hour on call support for parts and services for all machines and systems.

Founded in 1952 by Gaylord Brown in Beaverton, the company was founded to design and manufacture rotary and continuous thermoforming machinery. In the late 1960's twin sheet forming was introduced and in 1980, the company entered the direct extrusion thermoforming business and began to develop more complete in-house tooling capabilities. BROWN introduced their first thermoformer with independent third platen motion in 1999 and in 2002 they began shipping a new series of special equipment designed and manufactured to produce twin sheet fuel tanks.

BROWN Machine will continue to be dedicated to new developments to maintain their leadership in the thermoforming industry.
