## **New LS-Model Trim Press Brochure from Brown Machine**

A new brochure featuring the LS-Model T-Series Trim Press is now available from Brown Machine LLC. Brown Machine's new LS-Model horizontal trim press features the platen motion controlled through a servo motor and drive. This trim press is also capable of slowing down for a controlled long ejection into product handling systems, speed up to make up the loop, and maintain cycle time with the thermoformer.

The new literature offers information on the LS-Model trim press, including standard features, safety features, available options and machine specifications. A model specification chart lists detailed machine specifications such as maximum trim tonnage (from 15 tons to 50 tons), operating speeds and adjustable strokes, for each of the five LS trim press models.

As a global leader of thermoforming technologies, Brown Machine LLC engineers and builds a complete standard line of continuous and cut-sheet thermoforming equipment and related tooling/peripheral equipment. Specialty thermoforming systems suited to a wide range of markets (including automotive, recreational, packaging, appliance and various other industrial segments) can be custom built to exact customer specifications. Brown Machine fully supports the thermoforming industry (Brown machine owners and competitive models, as well) with a full complement of 24/7/365 on-call service and parts support.

For more information contact Brown Machine, 330 North Ross Street, Beaverton, MI 48612, Phone: 989-435-7741, fax: 989-435-2821, [www.brown-machine.com](http://www.brown-machine.com).
